EDUCATION

University of Petroleum and Energy Studies

BTech. CSE, Cloud Computing and Virtualization Technology

Aug. 2023 – May 2027

CGPA: 8.02

EXPERIENCE

Suratec Co., Ltd.

Backend & Cloud Intern

May 2026 – Present

Thailand (Remote)

- Engineered a millisecond-accurate sensor-video synchronization engine using binary search ($O(\log n)$) to align BLE telemetry with video playback, validated across 4 real-device datasets at 27–67Hz with avg error of **5.7ms** against a 50ms tolerance threshold.
- Designed and implemented a **RESTful API integration layer** connecting a React Native mobile app to a Laravel backend, covering authentication, multipart video upload, sensor ingestion, and metadata-linked phase detection across **5 live endpoints**.
- Authored a formal synchronization audit identifying **10 timing-drift defects** across the recording and playback pipeline; implemented and unit-tested a complete remediation layer with **230 automated tests at 100% pass rate**.
- Diagnosed and resolved critical production bugs including a Laravel datetime-overflow corrupting all sensor writes and a PHP-FPM misconfiguration silently blocking all video uploads, traced via SSH to exact controller-level root causes.

SapMen C.

SDE - Backend and DevOps Specialist

Mar 2026 – Present

Hybrid

- Built 20+ Next.js server actions in TypeScript and Prisma/MongoDB to drive a 7-state project request workflow (quotation, acceptance, contract, invoice) with server-side status transition guards.
- Developed a 3-step request creation flow with live ORG-ID verification and a service catalog fetched from a REST endpoint, plus a Cloudflare R2 upload pipeline for PDF and image attachments up to 20MB.
- Implemented a polling-based chat feature (3s interval) between consumer and provider roles, backed by a MongoDB-stored message thread scoped per request.
- Fixed a production routing bug in Next.js middleware causing cross-role session redirects, replacing full page reloads with `router.refresh()` to preserve client-side navigation state.

PearlThoughts

DevOps Engineer Intern

Feb 2026

Remote

- Engineered a centralized automation suite to bridge the gap between local development and cloud-scale deployments using Terraform for reproducible Infrastructure as Code (IaC) provisioning.
- Developed a robust library of Bash-driven system utilities that automate critical Linux administration, user management, and resource monitoring tasks to eliminate manual overhead.
- Streamlined application portability by architecting optimized Docker configurations, ensuring seamless environment consistency from local machines to the cloud.
- Integrated automated GitHub Actions workflows to enforce code quality through continuous integration, standardizing the deployment lifecycle for scalable cloud-native applications.

PingTV

Backend Engineering Intern (Project-Based)

Jan 2026

Remote

- Developed an **automated backend content moderation system** using **Firebase Cloud Functions** and Firestore triggers for real-time evaluation of user-generated content.
- Implemented **database-level enforcement controls** (`isPublished`, `moderationStatus`, `isFlagged`) to automatically block policy-violating content from publication and monetization.
- Built a **moderation audit logging pipeline** with post IDs, decision reasons, and server timestamps to ensure traceability and compliance readiness.
- Delivered production backend features via GitHub PRs, aligning platform safety infrastructure with **Stripe compliance requirements**.

- Engineered core dashboard modules (Sidebar, Inventory, Notifications) using **React, Next.js, and Tailwind CSS**, streamlining daily operations and improving platform stability.
- Architected scalable routing and a library of reusable components, reducing development overhead by **30%** and accelerating feature delivery across the application.
- Developed real-time analytics and automated inventory workflows, facilitating data-driven insights that improved executive decision-making speed by **45%**.
- Translated **Figma** prototypes into high-fidelity UIs and integrated backend APIs, optimizing frontend performance and reducing the design-to-production lifecycle by **30%**.

PROJECTS

Quantum-Cloud - Hybrid Quantum-Classical Cloud Workload Scheduler

Tech Stack: Python, Qiskit, AWS Braket, QAOA, QUBO Optimization, Streamlit, NumPy, SciPy, GitHub
Amazon EKS, AWS Batch

- Formulated cloud workload scheduling as a Quadratic Unconstrained Binary Optimization (QUBO) problem and encoded resource-allocation constraints into Hamiltonian cost functions for quantum optimization.
- Developed a hybrid quantum-classical scheduler integrating QAOA, Qiskit, AWS Braket simulators, and Simulated Annealing to investigate near-optimal workload placement strategies for distributed cloud systems.
- Conducted comparative benchmarking against Greedy, Simulated Annealing, and Brute Force approaches, demonstrating 35% improvement in allocation quality over baseline heuristics while matching optimal solutions on benchmark workloads.
- Designed a research-oriented orchestration framework connecting quantum optimization outputs to Amazon EKS and AWS Batch deployment workflows for future cloud resource scheduling research.

CloudDSL Compiler - Six-Phase DSL-to-Cloud Deployment Compiler

Tech Stack: Java, Compiler Design, Recursive Descent Parsing, AST, Symbol Tables, Intermediate Representation, Docker, Kubernetes, AWS ECS, VS Code Extension GitHub

- Designed and implemented a cloud-specific programming language and a complete compiler pipeline encompassing lexical analysis, parsing, semantic validation, AST construction, optimization, and code generation.
- Investigated compiler-assisted infrastructure automation through the development of a unified intermediate representation capable of targeting Docker, Kubernetes, and AWS ECS deployment environments.
- Developed semantic analysis and infrastructure verification mechanisms incorporating dependency resolution, deployment constraint validation, and autoscaling inference.
- Built an extensible language tooling ecosystem including compiler CLI workflows, syntax diagnostics, code intelligence features, and IDE-native infrastructure development support.

NitanshuOS - Custom Linux Distribution & Boot Pipeline

Tech Stack: Buildroot, Linux Kernel 5.10 LTS, BusyBox, GRUB, QEMU, Shell Scripting, Linux Net-working, AWS VM Import/Export, Docker GitHub

- Built a custom Linux distribution from scratch using Buildroot, integrating a hand-configured Linux kernel, BusyBox userland, GRUB bootloader, and automated image-generation workflows.
- Conducted operating systems experimentation involving kernel configuration, filesystem construction, bootloader integration, process initialization, and system-level deployment pipelines.
- Developed reproducible build environments and automated provisioning workflows for generating bootable disk images and cloud-compatible virtual machine artifacts.
- Explored virtualization and cloud image engineering through QEMU-based testing, AWS VM Import/Export workflows, and compatibility validation for custom operating system deployment.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, JavaScript

Cloud & DevOps: AWS (EC2, S3, IAM, EKS, CloudWatch, Lambda), Docker, Kubernetes, Terraform, CI/CD Pipelines, Microservices, GitHub Actions

Backend & APIs: Flask, Laravel, REST APIs, JWT Authentication, Firebase Cloud Functions

AI/ML & Data: TensorFlow, Keras, scikit-learn, XGBoost, MobileNetV2, Isolation Forest, Pandas, QGIS, Rasterio

Security & IAM: Identity & Access Management (IAM), OAuth 2.0, OpenID Connect (OIDC), MFA

Frontend & PWA: React, Next.js, Vite, Tailwind CSS, Leaflet, Recharts, Workbox, IndexedDB

Compiler & Systems: Lexical Analysis (DFA), Recursive Descent Parsing (EBNF), AST Construction, Code Generation, OS Internals, Buildroot

Databases: MySQL, PostgreSQL, MongoDB, SQLite, Firestore

Tools: Git, GitHub, Linux CLI, VS Code, Postman, QEMU, Maven, Google Colab

CERTIFICATIONS

- **AWS Academy Certified Operations** - AWS Academy, Dec 2025 [Credential]
- **AWS Academy Certified Architecting** - AWS Academy, Nov 2025 [Credential]
- **OCI Certified DevOps Professional** - Oracle University, Oct 2025 [Credential]
- **OCI Certified Multicloud Architect Professional** - Oracle University, Sep 2025 [Credential]

ACHIEVEMENTS

- **Admitted - Algoverse AI Research Program, Summer 2026 Cohort** - Selected with scholarship offer for an international LLM & Applied ML Research cohort among applicants from multiple countries; declined due to existing professional and academic commitments. [Post]
- **Selected Contributor/Mentee - GirlScript Summer of Code 2026 (GSSoC'26)** - Accepted into both the **Open Source Track** and **AI/Agents Track**; contributing to impactful open-source projects and collaborative AI agent systems. [Post]
- **University Rank 2 on Unstop** and placed in the **Global Top 0.21%** among participants; also nominated for **Unstop Talent Awards 2026**. [Profile]
- **Google Cloud Arcade Facilitator Program 2025** - Achieved Diamond League and Trooper Tier with **14,852 points** through hands-on cloud architecture labs. [Post]
- **International Conference Presenter (ICATEET 2026)** - Presented research project “Helios: AI-Enabled Secure Cloud Infrastructure” with live system demonstration. [Project] — [Post]
- **Ideathon Finalist (Solo)** - “Kevlar” project shortlisted for final round; independently designed and presented solution to industry professionals. [Project] — [Post]
- **Hack For Green Bharat** - Ranked within **Top 100 teams** nationally among 7,000+ competing teams.
- **Open Source Contributor - Hacktoberfest** - Contributed to open-source repositories during Hacktoberfest; recognized for community-driven development contributions.
- **Campus Ambassador** - LetsUpgrade, Internshala Student Partner, IIT Roorkee E-Summit 2026, IIM Indore IRIS, IIT Delhi EDC.
